

# PHANTOM SCREENS™

February 2017

## Phantom Screens FAQs

### Why choose a power screen over a big blind?

Our Executive Screen is a zipped screen that delivers solar, privacy and ventilation benefits when doors are open. The performance fabric physically zips itself into the side track, which retains it in windy conditions. It can be fully recessed or retrofitted internally or externally.

### What is the maximum size your power screens can be made to?

We can make recessed screens up to 12m wide x 3.4m drop. For retrofitted installations, we can make screens up to 6.6m wide x 3.4m drop.

### What are the ceiling pocket space requirements for recessing?

Depending on the screen width, either a 4 or 5-inch diameter roller tube will be used. The 4-inch tube requires a pocket space 140mm wide x 230mm high. The 5-inch tube requires a pocket space of 203mm x 290mm.

### What are the head box and side track dimensions?

The headbox is 140mm x 140mm and side track is 35mm x 35mm.

### What colours does the hardware come in?

Any standard RAL colour.

### What type of motor is used and what provision of power is needed?

The motor is a 230v spec that requires a dedicated switched fuse spur.

### Where does the motor go and how big is it?

A 50mm tubular motor is housed inside the roller tube of the screen. There are no external additional boxes or components.

### What are the control options and can the screen be linked to a home management systems?

A Somfy RTS (radio signal) can be operated by a simple remote control or wireless wall switch. Phantom Screens are compatible with all home automation systems.

### What are the mesh options?

We offer a range of mesh types with different openness factors - from insect control at around 50%, through to privacy right down to 5%.

### What differences are there in fabric colour?

Dark coloured fabric mesh allows you to see through the mesh and focus beyond. The darker the mesh colour the less light reflection and glare. The lighter the mesh, the more light is reflected back towards you, which can help to make interiors feel brighter and more spacious.

### Does the system have to be planned or can it be retrofitted afterwards?

If the screen needs to be hidden from sight when retracted and fitted internally, then forward planning is needed to ensure sufficient space is provided. The standard specification inside the cassette is designed as a retrofit solution.

### Can the fabric mesh be replaced if it is damaged?

Yes, the mesh can be changed and replaced easily if required.

### What is the warranty on the product?

There is a limited lifetime warranty on all hardware and a five-year warranty on the motor.
