

PHANTOM SCREENS™

July 2017

Privacy and Solar Solution for Glazed Openings

Demand for glazed extensions, oversize openings and connected spaces is set to continue in 2018. When it comes to doors, there's nothing your clients don't know about the words sliding, bifold and Belgian. They want light, and glass remains key to delivering it.

So, what's the answer when they seek advice on solar, privacy, and insect control? Perhaps they're put off by the lack of ventilation when using thermochromic glass. Maybe curtains are deemed

dated and automated shading is a little too commercial? The ideal solution is to tell them about Phantom Screens. Our state-of-the-art powered screens are fully automated systems capable of screening openings up to 12m wide.

Phantom Screens are designed to fully recess from view when retracted, to ensure minimal impact on architectural design – and can be finished in any RAL colour. Thermal comfort gains are made by deflecting energy during the day and retaining warmth – both of which help to improve SAP ratings.

A range of technical meshes is available including solar shading, privacy screens, and insect meshes for bug-free ventilation. Phantom Screens can even link to home automation and optional sun and wind sensors for automatic screen position adjustment.

Phantom Screens have been adding value to property design in Canada and the USA for many decades. We now manufacture in the UK to the highest standards and with the same quality construction that Phantom Screens is known for in the US.
