

PHANTOM SCREENS™

June 2018

The Interior Designer's Contemporary Alternative to Net Curtains

Interior designers creating contemporary schemes with clean lines now have an ideal alternative to fabric window and door treatments: powered Phantom Screens.

The Changing Face of British Homes

As a nation, we've fallen in love with interior schemes that celebrate natural light, but with the rise in popularity of glass extensions and light-filled living comes a host of issues - including privacy, ventilation, and heat regulation.

Voiles, shutters, traditional blinds, and curtains don't respect the clean lines of a contemporary scheme and can be tricky to install alongside modern bifold or sliding glazed doors. That's why Phantom Screens offers the ideal alternative: fully retractable, automated mesh screens made in widths of up to 12 metres. Our powered screens can provide privacy protection without impacting the view, as well as solar shading that blocks up to 95% of harmful UV rays to create a comfortable living environment - without nuisance insects.

Blinds can be retro fitted or fully recessed *and* colour matched to tie in with an interior scheme, meaning that they disappear completely when not in use.

An Overview of Phantom Screens

- Fine mesh blinds offering a bespoke solution for solar, privacy, and insect problems.
- The ideal answer for large, glazed spaces with fully automated screens up to 12 metres wide.
- Made from waterproof PVC-coated polyester or fibre glass mesh available in a variety of densities & colours.
- A four-sided 'zipped' product, providing stability and security, even in breezy weather.
- Fully recessed motor and workings create a discreet finish with no impact on interior design.
- Colour matching ensures the product blends seamlessly with existing interior schemes.
- Can be linked to home automation systems, as well as sun and wind sensors.
